Olist E-Commerce Data Dictionary

---

1. Overview

The Olist dataset represents a Brazilian e-commerce marketplace. It contains transactional, customer, product, and logistics data.

This document describes:

- tables available in the database
- key columns
- relationships between tables

This information is used to support SQL query generation and analysis.

---

2. Tables and Columns

Orders Table (orders)

Contains one row per order.

Key columns:

- order_id – unique identifier for each order
- customer_id – links to customers table
- order_status – order lifecycle status (e.g., delivered, canceled)
- order_purchase_timestamp – purchase date/time
- order_delivered_customer_date – delivery completion date
- order_estimated_delivery_date – expected delivery date

Order Items Table (order_items)

Contains one row per item within an order.

Key columns:

- order_id – links to orders

- order_item_id – item number within the order
- product_id – links to products
- seller_id – links to sellers
- price – item price
- freight_value – shipping cost

Products Table (products)

Contains product information.

Key columns:

- product_id – unique identifier
- product_category_name – product category
- product_name_lenght – length of product name
- product_description_lenght – description length
- product_weight_g – weight in grams

Customers Table (customers)

Contains customer location and identifiers.

Key columns:

- customer_id – unique identifier
- customer_unique_id – identifies returning customers
- customer_city – city
- customer_state – state

Sellers Table (sellers)

Contains seller information.

Key columns:

- seller_id – unique identifier
- seller_city – seller location
- seller_state – seller state

Payments Table (payments)

Contains payment details.

Key columns:

- order_id – links to orders
- payment_type – credit_card, boleto, etc.
- payment_installments – number of installments
- payment_value – amount paid

Reviews Table (reviews)

Contains customer feedback.

Key columns:

- review_id – unique identifier
- order_id – links to orders
- review_score – rating (1–5)
- review_comment_message – text feedback

---

3. Key Relationships

- orders.customer_id → customers.customer_id
- order_items.order_id → orders.order_id
- order_items.product_id → products.product_id
- order_items.seller_id → sellers.seller_id
- payments.order_id → orders.order_id

- reviews.order_id → orders.order_id

---

4. Notes

- Revenue is typically calculated from order_items.price
- Shipping cost is freight_value
- Multiple items can exist per order
